Nestor Velasquez

Zendesk Support Ops Automation for SaaS and ecommerce teams

Panama City, remote | ndvelasquezl@gmail.com | linkedin.com/in/nestor-david-velasquez | github.com/ndvelasquez

Summary

I help support teams fix the Zendesk setup that slows them down: ticket routing, macros, views and SLA rules, plus the automations and API integrations around them. I spent 6+ years in L2/L3 technical support for B2B SaaS and API-based platforms, so I know the queue from the agent's side.

In those roles I supported 200+ enterprise accounts, worked about 40 critical incidents a month at 100% SLA, and built Zapier and n8n automations that cut manual support effort by 70%. I work in English and Spanish.

Skills

Helpdesk: Zendesk admin (macros, views, SLA policies, auto-assignment), Jira, ServiceNow, knowledge bases

Automation: Zapier, n8n, AI-assisted workflows, automated KPI reporting

APIs and data: REST APIs, webhooks, Postman, SQL, AWS Athena, AWS S3 and Lambda, SSO troubleshooting

Incidents: incident management, root cause analysis, alert tuning, New Relic, Coralogix, Splunk

Billing ops: Chargebee, Stripe

Experience

360dialog · Customer Support Analyst (independent contractor) Jul 2026 – Present

dLocal · Ops Monitoring Analyst Aug 2024 – Jun 2026 · Remote

- Monitored real-time payment operations across processors, payment methods and countries in New Relic and Coralogix, catching outages, latency spikes and transaction rejections.
- Managed incidents in Jira against a 5-minute acknowledgment SLA at ~100% compliance; handled 5-10 incidents a day and resolved critical ones in 15 minutes on average.
- Traced root causes across distributed payment systems with New Relic, Coralogix and AWS Athena (SQL).
- Coordinated incident response with Customer Success, Country Ops and external payment processors as the operational point of contact, from detection to closure.
- Tuned alert thresholds and rejection-code rules, cutting false-positive alerts by 80%.
- Built an AI-backed Zapier automation for incident tracking and case management.

Business Development Group, S.A. · L3 Support Analyst Aug 2025 – May 2026 · Remote

- Led a team of five on critical marketplace incidents: about 40 tickets a month at 100% SLA.
- Ran after-hours war rooms with product and DevOps to restore service; documented contingency plans and root cause analyses.
- Integrated Jira with ServiceNow to sync changes and escalations; wrote knowledge articles and built dashboards to speed up diagnosis.

Jooycar · L2 & L3 Support Analyst Sep 2021 – Sep 2025 · Remote

- Supported 200+ enterprise accounts on SaaS and API-based platforms, resolving escalated system and integration issues.
- Administered Zendesk: macros, views, SLA policies and auto-assignment.
- Troubleshot REST API failures (authentication, payloads, rate limits) in Postman and escalated to engineering with full technical context.

- Built Zapier and n8n pipelines for device onboarding, data processing and alerting, cutting manual effort by 70%.
- Automated monthly KPI reporting end to end, with no manual steps and 100% on-time delivery.
- Validated large datasets with SQL and built dashboards for CSAT, resolution time and incident trends.
- Wrote playbooks and documentation that improved response times by 50% and reduced recurring incidents by 20%.

Lean Tech · Technical Support Analyst Apr 2023 – Jun 2024 · Remote

- Resolved 10-15 tickets a week for cloud SaaS products at 100% SLA on business-critical applications.
- Diagnosed AWS S3 and Lambda data ingestion and delivery pipeline failures end to end, using Splunk and SQL.
- Investigated API and SSO authentication failures and handed structured findings to engineering.

Inversiones La Cruz · Technical Support Operator May 2019 – Nov 2021 · Lima, Peru (on-site)

Resolved IT helpdesk incidents within SLA and supported the daily business close.

Softensity Inc · Help Desk Support Representative Aug 2020 – Aug 2021 · Remote

Handled 50+ end-user IT tickets a week at 95% CSAT; wrote knowledge base guides that reduced repeat tickets by 20%.

Project

AI Ticket Triage for n8n · open source, synthetic data github.com/ndvelasquez/n8n-ai-ticket-triage

- Built an n8n workflow where an LLM proposes a ticket category and priority, and code decides the queue: the model must quote the ticket word for word, and doubtful tickets go to a person.
- Judged versions against a rule written before the test: 25 held-out tickets, 0 wrong categories reached routing unreviewed, 37 offline tests.

Education

Universidad Politécnica Territorial de Aragua (UPTA)
Associate's degree, Information Technology
2014 – 2016

Languages

Spanish (native)
English (C1, full professional)

Certifications

AWS Cloud Technical Essentials
Fundamentos de Ingeniería de Software
Curso de API REST con Laravel
Master en JavaScript
Curso Básico de Testing con PHP y Laravel
