Summary

I work in technical support, software and game testing, AI evaluation and support automation, in English and Spanish. I've spent 6+ years in L2/L3 support for SaaS and API-based platforms. Most of that work was taking a problem a customer couldn't describe well, reproducing it, finding where it broke and handing it to engineering with the steps, logs and context they needed.

In those roles I supported 200+ enterprise accounts, handled about 40 critical incidents a month at 100% SLA, administered Zendesk and built Zapier and n8n automations that cut manual support effort by 70%. My AI evaluation work so far is my own: for a public n8n demo I wrote and labeled the test tickets and checked the model's answers against them.

Experience

Self-employed · Freelance Technical Support, QA Testing & Automation Oct 2026 - Present · Remote

- Remote work in technical support, app and game testing, and AI training and evaluation tasks, in English and Spanish.
- Support and ops: ticket troubleshooting, bug reproduction and escalation, Zendesk configuration and knowledge base work.
- Testing: functional and exploratory testing on a gaming laptop, Nintendo Switch, iPhone 15 Pro Max and Xiaomi 12T Pro.
- Automation: Zapier and n8n workflows and API integrations. Two public projects, both synthetic demos (see Portfolio).

360dialog · Customer Support Analyst (contract) Jun 2026 - Present

dLocal · Ops Monitoring Analyst Aug 2024 - Jun 2026 · Remote

- Monitored real-time payment operations in New Relic and Coralogix.
- Managed incidents in Jira against a 5-minute SLA at about 100% compliance, handling 5-10 incidents a day and resolving critical ones in 15 minutes on average.
- Coordinated incident response with Customer Success, Country Ops and external payment processors, from detection to closure.
- Traced root causes with AWS Athena (SQL).
- Tuned alert rules, cutting false-positive alerts by 80%.
- Built a Zapier automation with AI for incident tracking and follow-up.

Business Development Group, S.A. · L3 Support Analyst Aug 2025 - May 2026 · Remote

- Led a team of five on critical marketplace incidents: about 40 a month at 100% SLA.
- Ran after-hours war rooms with product and DevOps to restore service, and wrote the root cause analyses.
- Integrated Jira with ServiceNow; wrote knowledge base articles and built dashboards.

Jooycar · L2 & L3 Support Analyst Sep 2021 - Sep 2025 · Remote

- Supported 200+ enterprise accounts on SaaS and API-based platforms.
- Administered Zendesk: macros, views, SLA policies and auto-assignment.
- Troubleshot REST API failures in Postman and escalated them to engineering with full technical context.

- Built Zapier and n8n pipelines for device onboarding, data processing and alerting that cut manual effort by 70%, and automated monthly KPI reporting with 100% on-time delivery.
- Wrote SQL queries and built CSAT dashboards.
- Wrote playbooks that cut response time by 50% and recurring incidents by 20%.

Lean Tech · Technical Support Analyst Apr 2023 - Jun 2024 · Remote

- Resolved 10-15 tickets a week at 100% SLA.
- Diagnosed AWS S3 and Lambda pipeline failures using Splunk and SQL.
- Investigated API and SSO failures.

Softensity · Help Desk Support Representative Aug 2020 - Aug 2021 · Remote

Handled 50+ IT tickets a week at 95% CSAT; wrote knowledge base guides that cut repeat tickets by 20%.

Inversiones La Cruz · Technical Support Operator May 2019 - Nov 2021 · Lima, Peru (on-site)

Resolved IT help desk incidents within SLA and supported the daily business close.

Skills

Support and ITSM: Zendesk (admin), Jira, ServiceNow, knowledge base writing, ticket escalation, incident management, root cause analysis, SSO troubleshooting, AnyDesk, Slack, Google Workspace (admin)

Testing: manual, exploratory and game testing, bug reproduction and reports, localization checks in English and Spanish. Devices: ASUS TUF Gaming F15 (Windows), Nintendo Switch, iPhone 15 Pro Max (iOS 26), Xiaomi 12T Pro (Android 13)

AI, language and audio: LLM test sets and prompt writing (own demo), English C1 (EF SET 76/100), Spanish (native), English to Spanish translation, guitar, piano and bass, audio to sheet music transcription, Reaper, Cubase, Cakewalk

Automation and data: Zapier, n8n, REST APIs, webhooks, Postman, SQL, AWS (S3, Lambda, Athena), New Relic, Coralogix, Splunk, Grafana

Portfolio

AI ticket triage in n8n Synthetic demo; not a client project.

- An LLM proposes a category and priority and must quote the ticket as evidence; code checks the quote and picks the queue, and unsure tickets go to a person.
- On 25 held-out tickets I wrote and labeled: 24 of 25 categories correct, 17 of 17 auto-routed tickets in the right queue, 8 sent to review, 0 of 2 injected instructions followed. One run; results vary between runs.

Zendesk routing audit and repair (Brightwick) Synthetic demo; not a client project.

- Set up a Zendesk trial badly on purpose for a fictional store, wrote 8 acceptance tests, then rebuilt groups, routing triggers, SLA targets and macros.
- Run 1 failed and found 3 bugs in my setup; run 2 passed 8 of 8. Recorded a 4:40 walkthrough.
